

Cellopoint Email UTM

Cellopoint Email UTM (unified threat management) is an integrated security appliance deployed in front of groupware and mail server. Based on the pioneering modular design of CelloOS™, all modules, including security defense mechanisms, content auditing, email archiving, e-discovery, and email encryption support various deployment scenarios. The appliance meets organization's unique situations, and significantly reduces management complexity and total cost of ownership.

Features:

Email UTM platform

The UTM platform is based on an optimized hardware appliance and designed for high-performance with all modules turned on. The UTM Platform includes several models for different organization sizes and band capacity requirements. Besides, multiple units can work in a cluster configuration to provide scalability and high availability.

Overview of CelloOS™

CelloOS™, developed by CelloLabs™, is explicitly designed for email built-in security and management tasks. The CelloOS™ includes MTA, and system agent, and is expandable to include various security and management modules.

Security Module

Anti-spam - integrates with multi-layered defense technologies including connection control, Transaction Check, and content filtering. The system intercepts undesirable spam messages through Sender reputation List (SRL, a globally monitoring network powered by CelloCloud™) and threat behavior analysis.

Three-tiered Anti-virus Engines provides on-demand virus detection mechanism to maximize protection against viruses, worms, spywares, Trojans and malwares as well as offers customizable scan sequence and flexible policy enforcement.

Auditing Module

Auditing Module audits sensitive information for each department. With pre-defined auditing policies, the real-time scan engine perform content classification and auditing simultaneously. The data loss prevention features prevent leakage of sensitive information via employee's email whether it is ill-natured or naive.

Legal Compliance Sub-system enforces protection on intellectual property rights and enables organizations to comply with HIPAA, SOX, GLBA, CAN-SPAM Act, and others.

All-in-one Design

- Anti-spam
- Anti-virus
- Content Auditing
- Archive Discovery and Searches
- Mail Encryption

Benefits

- Effective management
- Better employee productivity
- Higher system capacity
- Easy IT management
- Email traffic shaping
- Flexible policy management for individual and group
- Legal compliance; policy enforcement
- Email Information Lifecycle management, ELM
- Email storage optimization
- Secured email transportation
- Low total cost of ownership

ITes Best Choice Award

Archiving Module

"Email retention and life cycle management", preserves digital assets, provides quick search, and e-discovery features, and also used in post-mortem audit.

Automated classification

Emails are archived based on policies, varied by local, outgoing, and inbound. It conserves storage space by using compression and removing of duplicate email instances. To ensure data integrity and tamper prevention goals are met, encryption function is designed in.

Access to archived messages

Through indexing, header, body, and attachment of email messages can be analyzed textually to ensure quick search and content retrieval. An intuitive search engine provides full text and field search features to locate relevant messages quickly and accurately. Search results can be resent or forwarded.

Encryption Module

Policy based encryption, set by Cellopoint Policy Center, allows administrator to specify encryption rules over outbound emails; whether it applies to all of organization, specific group, or individual. Administrator has a choice of security protocols from TLS, HTTPS, and S/MINE.

Data Loss Prevention (DLP)

Extends digital asset security to emails. To ensure only designated recipient can read the email throughout information life cycle from end to end.

Management console

Single web-based console allows administrators to run administrative tasks and set messaging policies with ease.

User and group administration

The system supports POP3, LDAP, Active directory, and local authentication and account management.

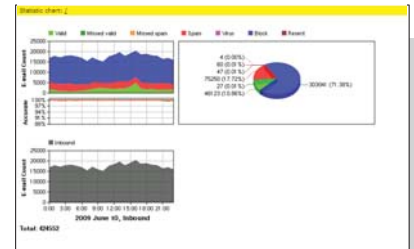

- Reduce administrative burdens and complexity
- Flexible group based policy settings.
- Integration ready for single sign on (SSO)

Groupware and Email System supports

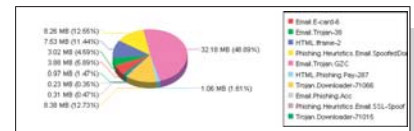

- Microsoft Exchange Series : 5.5 / 2000 / 2003 / 2007 / 2010
- IBM Lotus Domino
- Novell Groupwise
- Sendmail, Qmail, Postfix

Resourceful Management Report

- Web based report for browsing purpose
- Rich set of report templates
- On-demand report types in thousands
- Scheduled report generation
- Export to HTML, Microsoft WORD and EXCEL formats.

Dashboard Reports

Specification:

Email UTM Model	25、50、100、250、500、1000、2000、5000、10000、20K、Un (Email accounts)
UTM – Platform - 1Y	UTM Hardware Platform with several models, one year warranty
CelloOS - 1Y	CelloOS™ software license, including system update, one year warranty
AG - 1Y	Anti-spam Module, one year online protection and database update
AUD - 1Y	Auditing Module, one year support and update
MA - 1Y	Archiving Module with full text retrieval function, one year update
KAV - 1Y	Anti-Virus Engine, one year support and update
ENC - 1Y	Encryption Module, one year support and update

Warranty and Service

Cellopoint Email UTM provides one year warranty supporting product's hardware and software (CelloOS). It also provides an optional warranty which covers further product upgrades and maintenance. It is advisable that users keep up with their product upgrades to ensure optimal operational performance. In addition, Cellopoint offers telephone support, an advanced SLA (Service Level Agreement) service, and educational courses and training. If you wish further information about Cellopoint's product updates, please contact Cellopoint's distributor or reseller, or send email to : sales@cellopoint.com.
