Email Security couldn't be any easier. Cost saving. Easy deployment.

Email Hosting Security Service

Cellopoint provides cloud service for advanced email security, monitored by Cellopoint Global Anti-spam Center (CGAC) - which will quarantine Spam, Virus and other email threats in the cloud.

Features

Maximum Email Security

We provide a service level of 99.99% service availability supported by powerful, world-class data centers with fully redundant infrastructure, power and bandwidth.

- Accurate spam blocking - Catch rate of over 99 percent, with multi-layers of filtering mechanism and CGAC providing 24×7 cyber threats monitor system.
- Two-layered anti-virus engines- Protecting your network environment from malicious mail attacks.
- Cellopoint CGAC ™- 24×7 management and monitoring services are designed to give you reliability in service continuity and real-time defense.
- Fraud inspection- Defend your organization from phishing scams and prevent your employees from social engineering frauds.
- Multi-language spam detection- With worldwide decoy accounts to capture spam mails and update to our Cellopoint Global Anti-spam Center.

Centralized and Simplified Management

- Web-based management portal- To search email context, set email policy and review reports and statistics.
- Flexible and easy management- Access and manage their own quarantines and create their own whitelists and blacklists to fulfill their needs.
- Abundant statistics report - Able to create thousands of different reports and analyze future cyber threats.
- Minimize the chance of downtime - Without the trouble of managing threat such as DoS and other mail attacks that can cause downtime to your appliance, CelloCloud™ security can increase the efficiency of your mail server by absorbing all the bombard mails and attacks while saving space on your storage.
- Easy set-and-forget management- By simply changing the MX record, all mail traffic will be scanned by our threat defend system. No hardware or software purchase require, providing hassle-free management solution and release your IT personnel to develop

Step 1 APPLY for hosting service

Cellopoint needs certain information to start hosting service, e.g. mail domain, server IP address, and number of email accounts.

Step 2 SET UP parameter

We will set up the parameter in our data center as soon as we receive the request and apply 30 days trial license for hosting service.

Step 3 CHANGE MX record and Start!

You have to change the DNS MX record and redirect email traffic to CelloCloud. Then emails will start to be filtered by Cellopoint.

Benefits

Simple Management

By flexibly setting the sending time and frequency on user interface, you'll receive daily notification from Cellopoint, where you can see if there's any missing spam or valid emails we mistake for spam. You can click "Spam" or "Not Spam" button to help us to improve the accuracy of catch rate.

Increasing Employee Productivity

By blocking all spam and unsolicited mails outside of your network while never losing a valid email, you can focus on your work and thus become more efficient. And the easy and flexible setting of email policy allows end-user to search and manage mails easily without relying on IT administrators to retrieve or search mails.

Reduce IT Costs and Calculation Complexity

Eliminate the purchase of hardware and software, the cost of data center, power, and bandwidth. No new system integration, deployment or consulting needed, reducing administration and depreciation costs. Our flexible payment options allow you to tailor the terms according to your business requirements. You simply pay a fixed monthly fee based on the number of users connected.

Suitable for

- Companies and organizations who have urgent need to solve problem of spam proliferation.
- Companies and organizations who wish to outsource IT to reduce total cost of ownership (TCO).
- Small and medium organizations with limited IT resources.

Functions
