CELLOPOINT SaaS Email Solution

Cellopoint SaaS Email Solution offers cloud-based inbound email protection, outbound DLP and archiving to protect organizations against email attacks such as phishing, BEC scams, ransomware and spam, as well as prevent email data loss and provide email retention and compliance.

Cellopoint SaaS Email Solution is ideal for organizations that plan to move to the cloud or lack the IT resources to deploy and manage on-premises infrastructure as Cellopoint SaaS Email Solution combines powerful email security, data loss and archiving features like on-premises secure email gateways while it saves on hardware and maintenance costs.

COP

Cellopoint Online Protection

COP is a cloud-based email security solution that offers full protection against all known and unknown threats, from spam and viruses to phishing emails, malware, BEC scams, and advanced persistent threats. With COP, you can be confident that all threats are blocked from reaching your inbox, ensuring a high level of protection.

COP - Standard

- Protects organizations against spam and known email threats including ransomware, trojans, and other types of malware.
- Intercepts subsequent virus attacks shortly after a virus outbreak.
- Blocks both mail bombs and DoS attacks.

COP - Advanced

- Detects and blocks known and unknown email threats.
- Detects and blocks malicious URLs.
- Detects new APT attachment attacks using sandbox analysis and MD5 hash comparison.
- Uses AI analysis and ML to detect and block BEC scams.

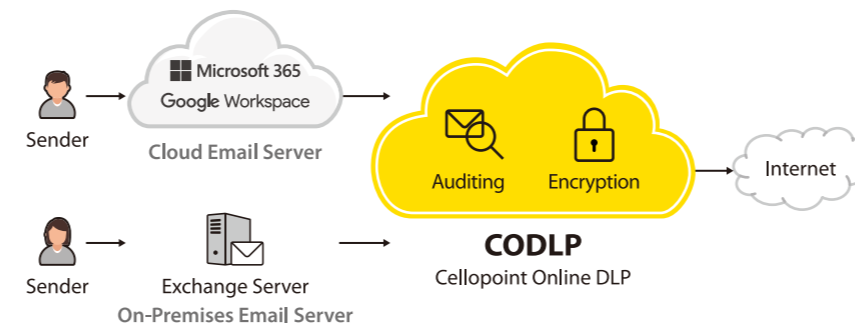

Feature/Model	COP-Standard	COP-Advanced	COP-Complete
Anti-Spam, Anti-Virus	✓	✗	✓
APT-URL, APT-File	✗	✓	✓
Anti-BEC	✗	✓	✓

CODLP

Cellopoint Online Data Loss Prevention (DLP)

CODLP offers cloud-based email auditing and encryption that detect sensitive and confidential information and take actions such as blocking, forwarding, notifying, or encrypting emails to prevent data loss, simplify email risk management, and ensure regulatory compliance.

COAUD (Cellopoint Online Auditing)

- Helps organizations prevent data loss by using pre-defined policies based on keywords and custom dictionaries to monitor outbound emails and take policy-driven actions, such as blocking, notifying, and forwarding emails to multiple auditors to review.
- Provides role-based security controls.
- Scans outbound emails in real time, supports multiple file formats, and provides a single console to manage policy settings.

COENC (Cellopoint Online Encryption)

- Automatically encrypts outbound plain text emails that trigger one of the CODLP encryption policies to ensure the secure delivery of confidential emails and mitigate the risk of data loss.
- Supports HTTPs, S/MIME, PDF+ password and ZIP + password encryption methods.

COA

Cellopoint Online Archiving

COA is a cloud-based email archiving solution that archives emails securely and ensures quick search and retrieval of emails by simply configuring journaling rules. It also features indexing, compression, encryption, and e-discovery functionality. COA helps organizations to stay compliant, reduce storage costs, and optimize data management.

- Effectively archives emails from cloud email servers like Exchange Online, Microsoft 365, or Google Workspace.
- Effectively archives emails from on-premises email servers like Microsoft Exchange.
- COA VM is the main system responsible for effectively archiving emails by indexing, compressing, and encrypting. It also offers a user-friendly web console for administrators to manage archived emails.
- Cloud storage offers on-demand scalability, high stability, reliable data protection, and cost-effectiveness.
- Enables fast search and retrieval of emails and provides role-based security controls.

Feature/Model	COA-Hybrid	COA
Cloud + On-Prem Archiving (Hybrid)	✓	✗
Cloud Archiving	✗	✓

Benefits

- Flexible subscription-based service
- Reduced the cost and complexity
- Faster deployment and updates
- Little maintenance and no hardware
