

Enhance your email DLP solution.

Email DLP ADV Management

Cellopoint Email DLP ADV (Data Loss Prevention Advanced) is an optional advanced management module that extends the capabilities of Cellopoint Email Auditing (AUD). It provides enterprises with an intelligent defense framework, delivering a complete workflow for sensitive data detection, response actions, event review, and approval tracking. When an email triggers a DLP ADV policy, the system automatically initiates a multi-level approval workflow, supporting designated approvers, reviewers, and sender self-confirmation mechanisms to ensure all outbound sensitive information is properly controlled. With comprehensive outbound email protection, Cellopoint helps organizations strengthen internal controls, meet regulatory compliance requirements, reduce manual administrative effort, and achieve a balance between information security, operational efficiency, and governance transparency.

Key Features

Policy Management: A top-down three-tier architecture enables flexible policy deployment based on organizational structure and administrative privileges.

Intelligent Classifier: Automatically detects sensitive information by inspecting email content, attachments, compressed files, and personally identifiable information (PII).

Action Plans: Instantly executes flexible security actions whenever an email matches predefined DLP policies.

Visual Event Tracking: Preserves complete request, approval, and release records for review and traceability, improving governance transparency while supporting compliance audits, ISO standards, and internal control requirements.

Reduced Manual Communication:

Standardizes workflows that traditionally rely on email, phone calls, or manual confirmation, improving cross-department collaboration efficiency and IT visibility.

Deep Integration with AUD: Combines the policy engine and workflow of AUD and DLP ADV to deliver an integrated email protection framework covering detection, monitoring, quarantine, approval, and release.

Web-based Management Console:

Provides a centralized management platform where IT administrators can easily monitor approval status, DLP incidents, and release activities, simplifying daily administration.

Core Capabilities

- Automated Auditing
- Flexible Policy Management
- Data Loss Prevention (DLP)
- Role-Based Access Control
- Policy Enforcement
- AD/LDAP Integration
- Custom Reports
- PDPA Compliance Tools

Benefits:

- Multi-level approval workflow
- Complete audit trail
- Prevent sensitive data leakage
- Regulatory compliance
- Reduced manual review costs
- Full event logs & traceability

Advantage

Pre-Delivery Approval Mechanism with Clear Roles and Responsibilities: DLP ADV provides a rigorous pre-delivery approval workflow. Through its multi-level architecture, the system clearly ensures that every information flow is traceable, significantly strengthening risk management and control.

Post-Delivery Automated Scheduled Event Management: The system automatically generates audit events for released emails based on defined times set by the administrator (e.g., daily or weekly). Combined with automated scheduled tasks, it automatically delivers the latest statistical reports and event logs to designated information security officers or auditors, achieving 100% regulatory audit compliance.
